SUPER SAVER PARKING LOT CONTROLLER

Cartrol Model #CRT-5

- 50% - 75% energy savings based on proven, reliable technology.
- One cartrol enables full automatic operation and energy saving for all size parking lots.
- Ideal for multiple parking stall applications, new or retrofit, by a single controller
Expensive multiple controllers are not required.
- Factory pre-programmed and field adjustable by single, four switch selector.
No special programmer required.
- Single operator - the colder it is, the longer the cycle time. Ideal for climates with lower evening and higher daytime temperatures.
Adjusts itself quickly on temperature fluctuations.
- Only a single controller is required no matter how many vehicles it is controlling. Allows unit to be designed for any new or retrofit parking lot.
- Available as a single controller with or without distribution panels and transformers.
- 50/50 load share and BMS override available.

NOTE

- No cost factory design assistance available.
